AutoCAD's drawing space is called the default-view space. This view displays a 2D geometric view of the drawing and is created when no other drawing space is selected. All further views are created by selecting a view from the View pull-down menu. Like many CAD applications, AutoCAD has a command line utility called the command-line interface (CLI). There are numerous CLI functions which make AutoCAD work on the computer by using the keyboard and mouse. Basic features of the AutoCAD 2018 software (source: AutoCAD.com) The command line is the primary way to work in AutoCAD 2018. However, there are two ways to work in AutoCAD. Some commands and tools require that the command line be used. However, many of AutoCAD's features are accessed via the graphical user interface (GUI). The toolbar, menus, and tool palettes, or menus that are in a drop-down box, are accessed by using the mouse to click a menu icon or button on the screen, or by using a menu command on the command line. The command line is primarily used in AutoCAD to perform functions such as creating layers, editing text, and selecting objects. It is also used for selecting items on the screen to copy to the clipboard and to insert those items into the drawing. It can also be used to change certain parameters such as view, drawing, and layer settings. In AutoCAD, commands are run in a command sequence. Some commands require arguments, or extra information, to work. For example, a command with parameters such as "C" and "F" indicates that the command needs an initial selection and a final selection. For example, if you ran the command "C" followed by "F" the first selection would be created and the second selection would be deleted. Following are examples of common AutoCAD commands and explanations of their use. Commands are underlined, italicized, or bolded to indicate their different functions. Start AutoCAD at the AutoCAD Command Line and Type Commands To start AutoCAD at the AutoCAD command line, click the CAD button (the blue button at the top right of the screen) and select the "Start Command
